ENTREPRENEURSHIP

A pioneering mind-set drives the services and commitment of Verbos Business Development. Own professional experience and knowledge, by being entrepreneurs ourselves, form the basis of the services that Verbos delivers. Verbos always considers each organization's unique situation when defining the business, operations, and investment objectives. Verbos assists you in developing your organization by using a combination of high level of creativity, business development and innovation with a strong focus on gaining successful economic viability. Verbos is strongly networked in the international development of agriculture and water sector and use their wide-ranging network for your benefit.

INNOVATION DEVELOPMENT ACADEMY

Leading by example

We founded various businesses in different countries ourselves and supported hundreds of other businesses in Africa, Asia and Latin America. Agriculture for most countries is incredibly significant, with many economies being highly dependent on it. It has helped countries in many ways, from creating employment opportunities, to contributing to National Income, and of course, helping feed the world.

The UN FAO's view is that the main problem we face is not global warming, extinction, or any other environmental crisis, but it is the degradation of our soils; which is why something needs to be done to not only prevent any more environmental damage, but also to reverse its effects. Our approach is holistic, regenerative and fair !!

"Innovation is progress in the face of tradition."

Social and ecological innovation is a powerful and valuable tool. Innovation is about staying relevant. We are in a time of unprecedented change. As a result, what may have helped an organization be successful in the past could potentially be the cause of their failure in the future. Companies need to adapt and evolve to meet the ever-changing needs of their constituents.

Development

"The value of an idea lies in the using of it."

Verbos is particularly involved in the development of the agricultural and water sector with its affiliated international trade chains. These are innovative sectors, both on a technological and conceptual level for positive environmental and social impacts, as well as economic sustainability, profitability, food security and water availability. With the complexity of problems that the world is facing caused by increasing levels of climate change, poverty, population growth and resource scarcity (among others), it will be of high importance to address the availability and flow of energy, food and water.

Academy

"Education is the key to unlocking the world"

Education is about teaching sustainable agriculture, natural resources, land & water management in the context of entrepreneurship on all levels. We work with different partners and blended game based learning into our curriculum.

NL-FSA

The NL-Food Security Alliance (NL-FSA) is a network of mainly Dutch companies and institutions developing exclusive and sustainable solutions in the agri-water-food-business.

NL-FSA is a Royal Eijkelkamp initiative
